

# AADESH KUMAR

AI Automation Engineer / Full-Stack Developer

Haridwar, India | +91 9760655299 | aadeshk306@gmail.com | linkedin.com/in/aadesh-kumar | github.com/aadesh-kumarr | Portfolio

## SUMMARY

Full-stack developer specialising in AI agent orchestration and workflow automation. Sole developer across five production SaaS products, and architect of multi-model LLM pipelines that research, generate and publish content across multiple platforms without human intervention. Comfortable owning a product end to end — database schema, API, interface, load testing and deployment.

## WORK EXPERIENCE

### CIS IT Solutions — Full-Stack & Automation Developer

April 2025 – Present

- **Sole developer across five production products** — Fesensi, Artisan, CXScore360, Nakshatra and PlutoCRM — owning frontend end to end and contributing backend architecture on each.
- Rebuilt the **Fesensi backend for multi-tenancy under senior mentorship**, removing the architectural limit that blocked onboarding new client organisations.
- Designed an **n8n + SERP API blog automation pipeline** that researches, writes, SEO-optimises and publishes content autonomously — **eliminating the need for a dedicated content/SEO hire**.
- Built and deployed **AI agents** across products (after-sales support, astrology consultation, CRM automation); took over agents stalled for ~3 months and brought them to production quality.
- Implemented **K6 + Grafana load testing** on Fesensi, surfacing and resolving performance bottlenecks pre-release.
- Wrote unit and integration test suites with **Vitest, Jest and Supertest** across backend services.
- Delivered **Socket.io real-time features**, **Agora** video consultation and **Razorpay** payments; integrated OAuth 2.0 alongside email/password auth.
- Led **Excalidraw-based architecture and flow documentation** reviews before implementation; mentored three junior developers.

### Perky Solutions — Junior Frontend Developer

December 2024 – March 2025

- Built dynamic dashboards and advanced data tables with sorting, filtering and pagination over **10k+ row datasets**; improved UI consistency and reduced development time by **20%**.

## PERSONAL PROJECTS

### Decoded Person — decodedperson.com

Live

Next.js 16 · React 19 · Prisma 7 · PostgreSQL · n8n · Multi-model LLM

- Automated tech-news pipeline: **20 RSS sources** → LLM triage → full-text scrape → fact-validation agent → quality gate → auto-publish, deduplicating against Postgres at every stage.
- Distributes each story to **YouTube, Instagram, LinkedIn and Discord** from one orchestrated workflow, including resumable chunked media uploads.
- Reached **average Google position 8.1 with 522 impressions in the first week** post-launch via IndexNow submission on publish.

### Japp Tattva — jappattva.com

Live

Next.js 16 · Prisma 7 · PostgreSQL · Redis · NextAuth · Razorpay · n8n

- Built a full **e-commerce storefront, admin backend and headless blog platform** as a monorepo, with Redis caching, scheduled cron jobs and payment integration.
- Engineered a **109-node content pipeline** (research → write → audit → SEO → publish) with **automatic fallback across GPT, Gemini and Llama** models.
- Built a keyword engine merging **Google Search Console** data with AI-generated candidates, scoring each 0–100 and auto-rewriting post metadata — **3.58K impressions over 3 months**.
- Shipped a session-aware **AI concierge chatbot** with intent routing and live product-catalogue lookup.

## TECHNICAL SKILLS

**AI & Automation:** n8n, AI agent orchestration, multi-model LLM pipelines with fallback, prompt engineering, OpenAI / Gemini / Groq / OpenRouter APIs, SERP API

**Languages:** TypeScript, JavaScript, SQL

**Frontend:** Next.js (App Router, SSR/SSG/ISR), React 19, Tailwind CSS, shadcn/ui, Radix UI, TanStack Query & Table, Framer Motion, Metronic

**Backend:** Node.js, Express, REST APIs, NextAuth / Auth.js, OAuth 2.0, JWT, Socket.io, cron jobs, multi-tenant architecture, microservices

**Databases:** PostgreSQL, MongoDB, Prisma ORM, Mongoose, Redis

**Testing & DevOps:** Vitest, Jest, Supertest, K6, Grafana, Postman, Git, GitHub Actions, Vercel, Cloudflare, Hostinger

**SEO & Analytics:** Google Search Console, Bing Webmaster Tools, Schema.org, IndexNow, Google Analytics

## EDUCATION

### B.Tech, Computer Science Engineering

2021 – 2025

Doon Institute of Engineering and Technology, Rishikesh
