SUMMARY

AI automation engineer specialising in **n8n agent orchestration**, **multi-model LLM pipelines** and **search-driven content systems**. The systems I build research, write, optimise and publish content with no human in the loop — and I own the SEO layer that makes them rank. Two live platforms of my own run entirely on this stack, and I have shipped production AI agents across five SaaS products. Also a full-stack developer — Next.js, TypeScript, Node.js and PostgreSQL — and sole developer on five production products, so I build both the automation and the product it plugs into.

CORE SKILLS

AI & Automation: n8n (AI agents, memory, structured output parsers), multi-agent orchestration, multi-model pipelines with automatic fallback, prompt engineering, webhook-triggered and scheduled workflows, human-in-the-loop gates, fact-validation and quality gating

AI Models & Tooling: OpenAI **GPT-5.6 Luna**, **GPT-5.4-mini** / **GPT-5.4-nano**, GPT-4.1-mini; Google Gemini 2.0 Flash; Groq (Llama 3.3 70B, Llama 3.1 8B, Compound); OpenRouter; LangChain nodes; **SDXL image generation**; Pollinations; SERP API, Tavily, Apify, Jina Reader

Social & Media Automation: **Instagram** Graph API (Reels, Stories, resumable chunked uploads), **Facebook** Graph API, **YouTube** Data API (upload, metadata, scheduling), **LinkedIn** UGC Posts API with registered media upload, Discord and Telegram bots

SEO & Search: Google Search Console API, Google Indexing API, IndexNow, Bing Webmaster Tools, Schema.org structured data, programmatic & technical SEO, keyword research and scoring, SERP and content gap analysis, Google Analytics

WORK EXPERIENCE

CIS IT Solutions — AI Automation & Full-Stack Developer

April 2025 – Present

- Designed an **n8n + SERP API content automation pipeline** that researches, writes, SEO-optimises and publishes autonomously — **eliminating the need for a dedicated content/SEO hire**.
- Built and deployed **production AI agents** across five products (after-sales support, online consultation, CRM automation); took over agents stalled ~3 months and brought them to production quality.
- Ran **SEO monitoring and technical search health** across company web properties with **Google Search Console and Bing Webmaster Tools**, feeding findings back into the pipelines.
- Sole developer across five production products** spanning multi-tenant SaaS, e-commerce, customer-experience analytics, online consultation and CRM — owning frontend end to end and contributing backend architecture.
- Rebuilt a client SaaS backend for **multi-tenancy under senior mentorship**; load-tested with **K6 + Grafana** and covered backend services with Vitest, Jest and Supertest.
- Delivered Socket.io real-time features, Agora video consultation and Razorpay payments; led Excalidraw architecture reviews and mentored three junior developers.

Perky Solutions — Junior Frontend Developer

December 2024 – March 2025

- Built dynamic dashboards and data tables with sorting, filtering and pagination over **10k+ row datasets**; reduced development time by **20%**.

AUTOMATION & SEO PROJECTS

Decoded Person — decodedperson.com

Live — solely owned

n8n · Multi-model LLM · Jina Reader · IndexNow · PostgreSQL · Next.js 16

- Reached **average Google position 8.1 with 522 impressions in the first week** post-launch, via automated **IndexNow** submission on every publish.
- Autonomous news pipeline: **20 RSS sources** → LLM triage → full-text scrape → **fact-validation agent** → quality gate → auto-publish, deduplicating against Postgres at every stage.
- One workflow publishes each story to **YouTube, Instagram, Facebook, LinkedIn and Discord** — SDXL-generated creatives, resumable chunked video uploads, per-platform copy.

Japp Tattva — jappattva.com

Live — solely owned

n8n · GPT / Gemini / Llama · Google Search Console API · SERP API · PostgreSQL · Redis

- Built a **keyword engine** merging **Google Search Console** data with AI-generated candidates, scoring each 0–100 on relevance, intent and competition, then auto-rewriting post titles, meta and excerpts — **3.58K impressions over 3 months, trending up ~3×**.
- Engineered a **109-node content pipeline** (research → write → audit → SEO → publish) with **automatic fallback across GPT, Gemini and Llama** when a model fails or rate-limits.
- Built a **HARO/PR outreach agent** that filters ~90% of irrelevant queries from journalist digests and drafts targeted pitches for link acquisition.
- Built the **platform end to end** — Next.js 16 storefront, admin backend and headless blog in one monorepo, with Redis caching, cron jobs, NextAuth and Razorpay payments.
- Shipped a session-aware **AI concierge chatbot** with intent routing and live product-catalogue lookup.

FULL-STACK ENGINEERING

Stack: TypeScript, JavaScript, SQL, Node.js, Express, REST APIs, Next.js (App Router), React 19, Tailwind CSS, PostgreSQL, MongoDB, Prisma ORM, Redis, NextAuth / OAuth 2.0, JWT, Socket.io, cron jobs, multi-tenant architecture

Testing & Ops: Vitest, Jest, Supertest, K6, Grafana, Postman, Git, GitHub Actions, Vercel, Cloudflare, Hostinger

EDUCATION

B.Tech, Computer Science Engineering

2021 – 2025

Doon Institute of Engineering and Technology, Rishikesh
